

Markus Rescue Line (RLC25)

The Markus throw line is a compact and light weight rescue line that is easily carried (on shoulder) or mounted (on an optional bracket) anywhere there is a risk of a man overboard incident. The Markus throw line is designed as a direct accessory to the Markus recovery solutions or can be used independently.

The throw line or rescue line can be used as standard equipment at pools, marine construction sites, work platforms or on any type of leisure or commercial vessel. The rescue line comes standard with a PVC/nylon throw bag and is equipped with:

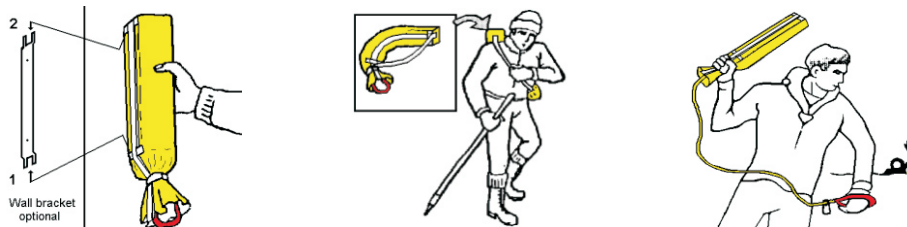

- Throwing load packed in soft foam,
- Chest-loop
- Safety-loop to secure in-water rescuer
- Handgrip loop
- Plastic snap hook on the far end

Specifications

- Length: 25 meters (82 feet)
- Rope width: 20 mm wide (.8 inch)
- Rope characteristics: buoyant webbing
- Weight: 900 grams (less than 2 pounds)

Stainless steel wall bracket is available as an accessory with two screws. RLC25 Wall bracket is optional.

Comments from Health and Safety and Operations

- A throw line is never available when needed urgently. We recommend that dedicated throw lines be positioned in a central place on a dedicated bracket or strategically place around 2 to 4 points around large vessels.
- During MOB drills it is helpful to have the crew practice throwing a throw line
